DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-8, 13, 16-17 and 19-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Rose.

Rose shows a fluid dispenser comprising a reservoir enclosed by a film 1, orifice 5, and an elastic (lines 8-51) head portion 7 for connecting the actuating wall and backing wall 8 and 9.

Claim 23 is rejected under 35 U.S.C. 102(b) as being anticipated by Steer et al.

Steer et al show a dispenser having two sealing films 60 and 66 and a dispensing orifice 64.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 9-10 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rose.

Art Unit: 3754

Rose lacks a piece of porous material adjacent the orifice. As admitted by applicant on page 8, lines 8-16 the porous material can be omitted. Further having a porous material adjacent a dispensing orifice is notoriously well known to filter out any debris. It would have been obvious to one of ordinary skill in the art to have modified Rose with a porous material because applicant admission that this is not a patentably critical feature and because having a filter adjacent an orifice is notoriously well known in the art.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Irwin and Purinton were cited to show further examples of a dispenser having an actuating and backing wall.
